Notes:
Voltage values in () taken before Av change from 68K to 82R.
Reverse Engineered from Unit Dated 22/09/99
Unit had issues - red-plate tubes 12Av/68R, Pdiss 15W/EL84
Replaced leaky LTPI CC - replaced both LTPI CC as a precaution
12V/68R = Pdiss 15W/EL84 - with B8R Vd = 12.7V and Pdiss = 12.8W/EL84
It is essential to use well matched output tubes.
