All resistors are 1/2 watt unless otherwise marked. All capacitors are 150 volts unless otherwise marked.

NOTE: The only isolation between the AC line and the chassis of this amplifier is a small "death cap" capacitor. To make this type of amplifier safer, it is recommended that an isolation transformer be installed between the AC power line and the amplifier.

Kent Models 1475, 2188, & 2198 were Guitar Amplifiers (Circa approx. 1963-1967).

NOTE:
Kent models 1475 and 2188 do not have a tone control potentiometer or the adjacent 0.1uF capacitor.
