PLEASE NOTE: Rick-Tone amplifiers underwent many changes and improvements over the time span that they were produced, and most were custom-tailored to individual owner's tastes. While this drawing may serve as a general overview for the circuit of this type/model of amplifier, it is unlikely that the circuit of your individual Rick-Tone amplifier will match this drawing in every detail.

CAUTION! ELECTRICAL SHOCK HAZARD: Vacuum tube circuits can contain dangerous high voltage electricity that can be harmful or even lethal if appropriate safety measures are not observed. Dangerous voltages may even still be present when the unit is turned off and unplugged. Do not attempt to repair, modify, touch, or build such circuits without proper training.

GUITAR PRACTICE/RECORDING AMPLIFIER
Power output approx. 4 Watts.
Voltagess measured with no signal in.
Volume and tone controls at 0%.
All resistors are 1/4 watt unless otherwise marked.
All capacitors are 400v unless otherwise marked.

NOTE: Preamp biasing, coupling and bypass components varied between units.
