Vox Venue Lead 30 - 1984

NOTES:

1. The value of this resistor is dependent on the type of spring delay used. Some boards may have a 107T electrolytic pre-kit.
2. All IC's are 4558 dual operational amplifiers.
3. 2N5089 transistors (2 indicated with 2.1K R80 1K 18 volt supply) to ensure low current regulation. Supply used for clarity also, these ICs are 2 04 capacitors between supply lines and ov.
4. 8.550's may be BC182's or 715s.
